Lab FabricMaster LFM

Closing the gap between laboratory and production

The Lab FabricMaster LFM provides the means to do real tests of dyeing processes and production of prototype pieces.

The machine is capable of dyeing 1 to 2 kg of fabric in full width with the same processes and conditions as on a big jet dyeing machine.

The machine is equipped with all features of a big machine namely, heating and cooling, filling, draining and rinsing.

The fabric can be prepared outside of the machine. Sewing of the rope can be done before loading the fabric into the machine.
